

A COST EFFECTIVE ALTERNATIVE TO OWNERSHIP

If you are in electronics, manufacturing, infrastructural development, or research & development, we understand that having the right equipment when you need it is critical but can also be very expensive. Through our **flexible terms, large variety of items in stock, and just-in-time delivery**, we provide a cost effective alternative to owning such equipment.

Cost savings

For infrequently used equipment, rental allows you to pay for equipment only when you use it.

Available when you need it

With our large inventory of items in stock, we can provide the specific equipment you need on a timely basis.

Protection against obsolescence

For equipment that is frequently updated due to technological advancements, rental allows you to renew with the latest technology.

Favorable accounting treatment

Rentals are booked as expenses which allow them to be 100% tax deductible. For rentals of less than one year you can also enjoy off-balance sheet treatment even after the implementation of TFRS16

EQUIPMENT AVAILABLE FOR RENT - STOCK IN THAILAND

We will gladly accommodate your needs. Please feel free to contact us with questions about the equipment.
