

EV IS GOOD FOR THE ENVIRONMENT AND CAN HELP YOU SAVE MONEY

Using electric vehicles (EVs) powered by renewable energy can achieve Zero Carbon Emissions. In addition, electric car charging costs is half the price when compared with a ICE (Gasoline) car for driving the same distance. With our competitive lease rents, using EVs have never been so compelling, instead it can contribute to cost reduction.

HOWEVER, ADOPTING EVS INTO YOUR FLEET MAY NOT BE SO SIMPLE

“How much will it cost me to maintain?”

“Will I lose money on the resale?”

“Does it make sense to be an early adopter, or should I wait until the technology improves?”

EV WITHOUT THE WORRIES!

EV leasing is the easy way to make the switch. You get all the benefits of a brand new car, without the hassle of owning it. All for an affordable monthly payment. Whatever you need, we ORIX can help you find the right leasing deal.

Better Cost Control

One fixed monthly fee for the use, maintenance, tires and insurance of your EV.

No Risk at Resale

There is no worry about the dropping the resale price of EV. Competitive residuals when we quote your lease rent.

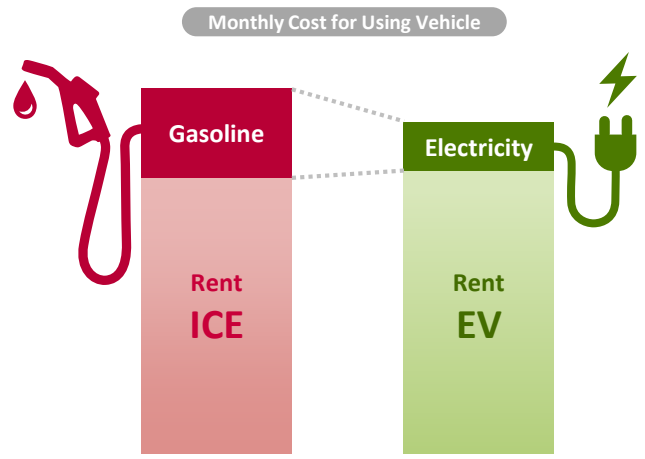

One Stop Service

We help you manage your EV fleet from purchase, maintenance and insurance until disposal.

TOTAL COST OF USE IS LOWER THAN ICE

The price of electric vehicles have become a whole lot cheaper after incentive packages were implemented by Thai government. Consequently, the monthly lease rent for EVs has become nearly equal to that of the ICE (Gasoline) cars.

Given the fact that electric car charging costs is half the price when compared with a ICE car for driving the same distance, it's not too much to say that the total cost of using EV can be lower than ICE's.
